Instructions for Applying Vinyl

1. Determine the area where vinyl should be placed. Measure, align and mark with a pencil the exact location.

2. Lay vinyl design on a flat surface with the grid side down.

3. Carefully press across the white opaque paper over the letters/design with a credit card.

4. Turn paper over so that grid side is up.

4. Gently peel grid paper away from the vinyl design. The vinyl should now show a reversed image on the non-grid sticky paper.

5. Place the vinyl design on the predetermined area. Make sure the sticky side of the non-grid paper is against the area where it is to be placed.

6. Using the credit card, gently rub across the vinyl design to transfer the design from the sticky paper to the predetermined area.

7. Gently peel the non-grid sticky paper away from the area, leaving the vinyl design.
